

Team Inventory

PIT Crew

September 15, 2026

Project Sponsors

David Rogowski

Mara Dzul

Pilar Rinker

Mentor

Smirthya Iyer

Team Members

Luke Flaker

Mia Gallo

Annaliese Dedmore

This team inventory introduces each member of the PIT Crew and gives a little background on who we are. It includes an overview of each team member's education, work experience, skills, and interests.

Lucas Flaker

Boise, ID | lgf33@nau.edu

EDUCATION

Northern Arizona University

Flagstaff, AZ

B.S. in Computer Science

Expected Graduation *May 2027*

Relevant Coursework: Database Systems, Computing Tools, Operating Systems

TECHNICAL SKILLS

Databases: MySQL, NoSQL; data definition and data manipulation languages

Web Development: HTML, CSS, Javascript, NodeJS, API integration; full-stack web application, gaining project management, version control, collaborative development

Software Design: Python, C; developing complex software systems in teams

PROJECTS

Airline Database Project

Spring 2026

Academic Project | MySQL Workbench, Python

- Developed a Python-based airline management application using MySQL and DAO classes to perform CRUD operations, manage foreign-key relationships, and generate database-driven reports

INTERESTS

Outside of School, I enjoy playing Basketball, Weightlifting, Hiking, Camping, and many more outdoor activities.

Mia Gallo

Flagstaff, CA | mmg333@nau.edu

EDUCATION

Northern Arizona University

Flagstaff, AZ

B.S. in Computer Science

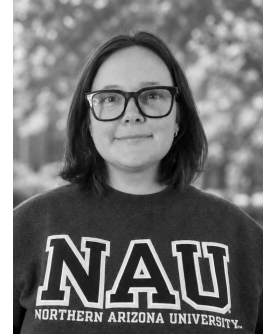

Expected Graduation *May 2027*

Relevant Coursework: Database Management Systems, Computing Tools III

Arizona State University

Online

Relevant Coursework: Software Engineering

SKILLS

Programming: Experience with C++, Java, Python, and JavaScript through several university programming courses.

Databases: Worked with SQL, MySQL Workbench, database design, and entity-relationship diagrams in Database Systems at NAU.

Application Development: Built Java applications with JavaFX and H2 databases, including user accounts and role-based access, in Software Engineering at ASU.

Software Testing & Design: Practiced testing, debugging, security checks, and UML diagramming in Software Engineering at ASU.

UI/UX: Created user interfaces with JavaFX, HTML, CSS, and EJS through multiple university courses.

Development Tools: Used Visual Studio Code, Eclipse, GitHub, and Microsoft Azure for coursework and team projects.

PROJECTS

Discussion Board Application

Summer 2026

Academic Project | Java, JavaFX, H2 Database

- Built a discussion board application for students and instructors with account management, role-based access, and features for creating, editing, searching, filtering, and replying to posts.

Database Systems Project

Summer 2026

Academic Project | MySQL, SQL

- Designed relational databases, created ER diagrams to model table relationships, and wrote SQL queries using joins, subqueries, aggregate functions, and set operations.
-

INTERESTS

I love spending my free time outside, especially hiking and backpacking. I also spend a lot of time reading and enjoy creative hobbies like knitting, sewing, and linocut printmaking.

Annaliese Dedmore

Phoenix, AZ | ard584@nau.edu

EDUCATION

Northern Arizona University

Flagstaff, AZ

B.S. in Computer Science

Expected Graduation *May 2027*

Relevant Coursework: Software Engineering, Database Management Systems, Computing Tools III

TECHNICAL SKILLS

Languages: C, Python, JavaScript, HTML, CSS

- Gained proficiency in the languages above through implementation and practice in numerous projects throughout my academic career

Tools: MySQL, NoSQL, GitHub

- Within classes focused on database management systems, I have gained the ability to utilize MySQL and NoSQL within programming projects. Additionally, through group work I have used GitHub in numerous projects and circumstances

Systems: Windows, Mac, Linux

- Used multiple systems over the course of my academic career via projects and coursework
-

PROJECTS

Preliminary App Testing

Fall 2023 - Current

Freelance | Manual QA Testing, iOS, Android

- Manually tested mobile applications to identify and report bugs before release that would cause the program to fail, crash, or not update properly

Simulated Operating System

Spring 2026

Academic Project | C, Linux, POSIX/threads

- Extended an initial framework by Dr. Michael Leverington, creating a file called simulator.c that implements six different scheduling algorithms, utilizing pthreads and mutex locks in order to simulate processes designed to run concurrently to one another, managing their resource allocation

Database Query Systems

Fall 2025

Academic Project | MySQL, SQL

- Wrote queries incorporating joins, nested subqueries, and set operations (e.g. UNION) to combine and filter data across multiple tables
-

INTERESTS

My favorite pastimes come from creative outlets such as drawing and completing crafts. Additionally, I love to read and write.
